

Want to **save** **thousands**

on your generator fuel costs?

Your savings equation:

**HUSSH POD
BATTERY STORAGE**

One of our generators

The experiment used a robust 60KVA generator

Based on a **3-month period**

= **SAVED £21,393 in fuel costs**
and 43,445kg of CO₂ which is **139,000 miles**
in a Ford Transit van

Strategically configured - the generator handles daytime high loads, while the battery pack takes over in the evenings. Controlled by our precision timer, this setup optimises energy usage, ensuring efficient and cost-effective power distribution throughout the day and night.

It's not just power. It's progress.

Say goodbye to excessive fuel expenses and hello to a greener, more sustainable future.
